

A Leading Global Financial Services Company: Setting Up a Dedicated Mobile Testing Lab to Automate Regression Test Cases

Global financial services leader partners with UST Global to achieve accelerated 'speed-to-market' at significantly reduced costs

Opportunity

Establishing a dedicated mobile testing lab for automation of regression testing cases

Action

End-to-end mobile testing support

Impact

Automated regression drastically reduces cycle time and increases speed-to-market

The complexity that mobility brings to QA and test management is immense. It involves testing in compressed cycles, across different permutations of technology platforms, operating systems, devices, use cases, network connections and carriers.

UST Global enabled a large global financial services company to significantly reduce their regression cycle time for 'faster-to-market' success.

We set up a dedicated mobile lab, evaluated different mobile testing tools to select the best one for the client, and developed an automation framework to enhance the tool capabilities. In addition, our processes for device lab refresh (that leverage usage trends in the mobile market) widened device and test coverage, and improved the quality of 'releases-to-production'.
