

AGILE TESTING FOR A MULTINATIONAL ASSET MANAGEMENT COMPANY

BUSINESS PROBLEM

Customer was embracing Agile and Devops practices for increasing the throughput of releases to production.

They were also looking for a solution that can generate GDPR compliant test data and improve the speed of test data provisioning.

BENEFITS

- 65%** Test automation coverage
- 30%** Reduction of regression cycle time
- 100%** GDPR compliance by leveraging synthetic test data
- £800K** Annual savings by implementing automation practices

SOLUTION

Implemented a Hybrid Test Operating Model to support the Agile and Devops Implementation

Leveraged proprietary Framework 'GFAT' to automate End to End business processes spanning across multiple technologies

Leveraged Genrocket to generate synthetic test data to eliminate dependency on production data

Integrated Test automation and data solution to the continuous delivery pipeline
